Five Expensive Mistakes Aviation Attorneys Make When Hiring an Expert Witness

Choosing the wrong expert witness can quietly sink an aviation case. Here are five costly mistakes to avoid — and why Legal Eagles Aviation is the partner your practice needs.

1 Hiring a "Big Name" Instead of the Right Expert

An impressive résumé doesn't always equal the right expertise. A 10,000-hour retired military commander might look great on paper — but if your case involves maintenance, ATC, or a specific commercial aircraft accident, they may be the wrong fit.

2 Delaying When You Bring the Expert In

Bringing in an expert late means potentially missing critical opportunities. Key evidence may be overlooked and case strategy suffers. A strong expert helps shape the case early — not just testify at the end.

3 Failing to Vet Your Expert for Courtroom Experience

Knowing aviation is one thing — explaining it clearly under pressure is another. Some experts fall apart in depositions or cross-examination. You need someone who can teach, not just talk.

4 Underestimating the Need for Communication Skills

Aviation is loaded with jargon, regulations, and technical subtlety. Your expert must translate complex concepts into simple, believable language. If the jury doesn't understand it, it doesn't matter.

5 Focusing on Cost Instead of Value

Expert witness fees are real, but they're a fraction of what a weak opinion or poor courtroom performance can cost your client. The right expert strengthens arguments and builds credibility. Going cheap can cost you the case.

Our Team of Experts Specialize In

Aircraft Design & Sales	Accident Reconstruction	NTSB, FSDO & FAA
Airline, Corporate & Gen. Aviation	Air Traffic Control (ATC)	ATP Pilot Training
Aviation Safety	Behaviors & Errors	Blackbox Analysis
Contract Analysis	Corporate Aviation	DPEs & CFI Instruction
Engines, Airframes & Avionics	Environmental Factors	FAA Requirements
Fatigue	Flight Schools & Training	General Aviation
Historical FAA Trends	Inspection Procedures	Maintenance Failures
Maintenance Programs	Manufacturing & Engineering	Mechanical Failures
Medical Issues	Operational Procedures	Personal Injury
